

METHOD AND SYSTEM TO IMPROVE THE TRANSPORT OF
COMPRESSED VIDEO DATA

Abstract of the Disclosure

5

A method comprises determining a plurality of time intervals T_p and T_n within a variable bit rate (VBR) representation of an image sequence. The time intervals T_p are those in which a number of blocks of information per unit time is greater than a baseline value. The time intervals T_n are those in which a number of blocks of information per unit time is less than the baseline value. A second representation of the image sequence is created in which some blocks of information B_p are removed from the time intervals T_p and interlaced with blocks of information B_n in the time intervals T_n to reduce a variation in a number of blocks of information per unit time between the time intervals T_p and T_n .
